Workout-Log

Quality of Work: 3pts full credit

Comments: Good outlines and definition of scope of work. Would have been nice to see in-depth technical work on how its going to work, something like a list of classes or a mock gui or something.

Intellectual Merit: 3pt full credit

Comments: While a simple concept I think it can be very complicated if using some type of algorithm in it. For example, if I weigh 185 and want to lift my way up to 200 it would preselect workouts. Other situations like that would make this a very interesting and complex project.

Video: 3pts full credit

Comments: Nice video explanation of the document, although like in quality of work it would be been nice to see some technical work.
